

ABSTRACT OF THE DISCLOSURE

Impressions at the time of obtaining image data by  
photography with an imaging apparatus such as a digital camera  
can be lead directly to a printing order. The image data  
5 obtained by the digital camera are displayed on a display means,  
and stored in a data memory as selected image data by pressing  
a transfer confirmation button in the case of placing a printing  
order regarding the image data. When the digital camera enters  
a communicable range of wireless LAN communication equipment,  
10 communication means that carries out wireless LAN communication  
sends the selected image data via a wireless LAN to an addressee  
that carries out printing.
